

### **Amendments to the Claims:**

This listing of claims will replace all prior version, and listings, of claims in the application.

### **Listing of Claims:**

What is claimed is:

1. (Currently amended) A method for setting up redirection of contacts coming to a terminal to at least one other communication system, comprising: sending a proposal to the terminal of an address of said at least one other communication system by utilizing a data transmission connection set up between the terminal and a first communication system ~~to the terminal~~ to be accepted and/or to activate the redirection.
2. (Currently amended) The method according to claim 1, wherein the at least one other communication system is located outside the coverage area of the first communication system.
3. (Previously presented) The method according to claim 1, wherein the data transmission connection comprises a short-range wireless data transmission connection.
4. (Currently amended) The method according to claim 1, wherein the terminal comprises means for performing a mobile communication.
5. (Currently amended) The method according to claim 1, wherein the terminal functions in an Internet Protocol IP based multimedia system (IMS).
6. (Currently amended) The method according to claim 1, wherein the received contacts are directed to the at least one other communication system depending at least in part on a parameter.
7. (Currently amended) The method according to claim 1, wherein a contact leaving another terminal and aimed at the terminal is directed to the at least one other communication system ~~on the basis of a parameter~~.

8. (Previously presented) The method according to claim 1, wherein a parameter is determined from the terminal that is the actual target of the contact.
9. (Previously presented) The method according to the claim 1, wherein data connected to the redirection is transmitted to another terminal.
10. (Currently amended) The method according to claim 1, wherein ~~the~~ deactivation of redirection is automatic ~~if~~when the terminal is switched on or at the latest after a certain time.
11. (Currently amended) A system which comprises:
- a first terminal,
- a first communication system coupled to said first terminal via a data transmission connection, and
- at least one other communication system, wherein a contact directed to the first terminal is capable of being directed to ~~said~~the at least one other communication system, wherein the data transmission connection is capable of transmitting the address of the at least one other communication system as a proposal to the first terminal, ~~which comprises the means for accepting the proposal and/or for activation the redirection.~~
12. (Currently amended) The system according to claim 11, wherein the at least one other communication system is located outside the coverage area of the first communication system.
13. (Previously presented) The system according to claim 11, wherein the data transmission connection comprises a short-range wireless data transmission connection.
14. (Original) The system according to claim 11, wherein the terminal comprises means for performing mobile communication.
15. (Currently amended) The system according to claim 11, wherein the terminal is arranged to function in an Internet Protocol IP-based multimedia system (IMS).
16. (Original) The system according to claim 11, wherein the terminal comprises means for automatically deactivating the redirection.

17. (Currently amended)                      The system according to claim 11, wherein, in addition, the system comprises means for directing the contact to the at least one other communication system based at least in part on a parameter.
18. (Original)                                      The system according to claim 11, wherein, in addition, the system comprises means for transmitting the data connected to the redirection to another terminal.
